		• Refills cannot be obtained until **80%** of the drug has been used. Next available refill date may be provided; however, the date is an estimate. Cumulative "refill too soon" logic also applies, which looks back at prescription history and considers the amount of medication on hand. Refills for maintenance medications are not considered new prescriptions except when the doctor changes the strength or the prescription has expired. • Recurring oral non-specialty and specialty medications must be obtained through the pharmacy benefit. Medications will not be covered when dispensed by other sources, including physician offices, home health agencies and outpatient hospitals. • Select specialty therapies are included in the Starter Fill Program. For these medications, you will receive a 14 or 15-day supply for the first 2 months of therapy. Your coinsurance will be prorated based on the days of therapy. • Medications may be available under the Prescription drug benefit and may require prior authorization. • Benefits for certain prescription medications and supplies (e.g., self-injectable or self-administered) are only eligible for coverage when dispensed by a pharmacy, under the pharmacy benefit even if you obtain these medications from your provider. • Some specialty and non-specialty medications may not be available in a 30-day supply; your coinsurance will be based on days of therapy. • Coinsurance for prescription drugs goes toward the annual in-network out-of-pocket limit except for the difference between the cost of the generic and brand name medication. • **The exclusion for hormone treatments for Sex-Trait Modification for gender dysphoria** only pertains to chemical and surgical modification of an individual's sex traits (including as part of "gender transition" services). **We do not exclude coverage for entire classes of pharmaceuticals**, e.g., GnRH agonists may be prescribed during IVF, for reduction of endometriosis or fibroids, and for cancer treatment or prostate cancer/tumor growth prevention.
