Figure 18

Digital misalignment is most prevalent in claims, quote and implementation processes.

QUESTION: Indicate whether the benefit technology tool is available to you and whether you currently use it or would use it if it were available.

AI and the future of benefits: Our broker interviews confirmed that AI will likely be the primary driver of disruption, particularly relative to enrollment. Specifically, AI will drive more personalized recommendations and education. Brokers also recognize the transformative possibilities of AI in underwriting, claims and client service. The rise of agentic AI coupled with new data sources (e.g., genetics, biometrics) will make it easier to more accurately predict outcomes and enable automated decisioning once concerns related to data privacy are resolved.
