Description of Procedure or Service

Infertility is defined as the inability to conceive pregnancy within a 12-month period for individuals under age 35 (6 months for persons aged 35 or older) through unprotected intercourse or artificial insemination. Infertility may also be established through evidence of medical history and diagnostic testing. Infertility includes the need for medical intervention to conceive pregnancy either as an individual or with a partner, except following voluntary sterilization.

Iatrogenic Infertility is an impairment of fertility by surgery, radiation, chemotherapy, or other medical treatment affecting reproductive organs including gonadotoxic therapies, or ovary or testicle removal for treatment of disease.

In vitro fertilization (IVF) is a method of assisted reproduction that involves combining an egg with sperm in a laboratory dish. If the egg fertilizes and begins cell division, the resulting embryo may be transferred into the uterus where it may implant in the uterine lining and further develop or be
